

Enviro Machine Wash

Concentrate

KITCHEN & FOOD PREP

PRODUCT DESCRIPTION:

Zexa Enviro Machine Wash is a concentrated, versatile, non-dangerous alkaline detergent, created to meet the exacting requirements in the hospitality, aged and health care industries. It is odourless and provides a safer alternative for the end user and the environment.

Whilst effectively removing stains, its built-in sanitiser kills germs for hygienically clean crockery and utensils. The non-dangerous, non-chlorinated formula makes it ideal for facilities with septic tank systems. Water conditioners and scale neutralisers drastically reduce scale build up and protect the inner workings of warewashing machines.

DIRECTIONS FOR USE: Do not use for manual dishwashing.

Electronic feeder:

Dispense 1-4mL per 1L of water through automatic dispensing equipment (according to your machine type and load weight dilution in the cleaning solution tank during the wash cycle program).

Tube feeder (for machines with integrated chemical pump):

Connect machine detergent tube directly to 5L or 15L container of Zexa Enviro Machine Wash. **Note:** it is important to first make a small hole in the bottle lid, just wide enough to snugly feed the tube through. This will prevent spillage and optimise the feed pressure to the machine.

PACK SIZE/S: 5L, 15L

ORDER CODE/S: 2-312-05000, 2-312-15000

FEATURES:

- Complies with health care industry standards
- Added water conditioners and scale neutralisers
- Fully biodegradable
- Highly concentrated
- Non-chlorinated, non-dangerous solution
- Australian made

BENEFITS:

- Best industry practice
- Better wash results
- Safer for the environment
- Made to suit Australian conditions, quality & safety requirements
